

Vacancy

AnalytiCon Discovery GmbH based in Potsdam, Germany, is one of the leading companies in the field of manufacturing and marketing substances based on natural products and the related services. Our clients are companies and research institutes, in particular from the pharmaceutical, food and cosmetic industries.

We have the following position to fill in the microbiology department:

Scientist – Microbiology

Your tasks:

- Organising the tasks of a microbiological laboratory
- Developing, validating, and executing assays and procedures
- Preparing job instructions and protocols
- Developing molecular biology methods and data mining protocols
- Organising and managing projects including communication with clients

Your profile:

- A university degree in microbiology or a related discipline, preferably to doctorate level
- You have extended your skills as post doc or you have gained initial experience in organising a microbiological laboratory
- You have the professional expertise needed to be responsible for a genetic engineering facility (GenTSV §15: Sachkunde des Projektleiters)
- You are familiar with relevant methods in molecular biology and their practical application including data mining
- You enjoy optimising processes including lab routines
- You have a structured, well organised and team-based work approach
- Your communication is clear, forward looking and open
- Your English is very good or fluent
- You have a passion for mycology, biocatalysis or microbial secondary metabolism

We offer:

- A permanent position located in Potsdam; the probation period is six months
- A responsible role with potential for development
- A supportive, international team environment
- Flexible working hours
- A comprehensive training programme
